

SNS Series

Illuminated, reflective Street Name Signs

Built for Long-Term Visibility and Performance

Signal-Tech's Internally Illuminated Street Name Sign (SNS) Series combines protected graphics, retroreflective visibility, rugged construction, energy-efficient LEDs, and easy maintenance for reliable performance in demanding roadside environments.

Street Name Signs

Protected Graphics

Graphics and retroreflective sheeting are applied to the **second surface of a clear, UV-resistant, impact-modified acrylic face panel**, protecting it from harsh environmental conditions.

The result: Long-lasting graphics that stay clear and legible.

Visible with or without Power

Translucent, prismatic retroreflective sheeting combines with internal LED illumination for:

- Bright, uniform illumination at night
- Retroreflective visibility when illumination is off
- Clear daytime visibility

Built for Harsh Environments

High-quality, outdoor-rated components help protect against weather, moisture, and contaminants:

- IP68 LED modules
- IP67 Power supply
- Optional IP66 photocell assembly
- Cabinet designed to meet IP55/NEMA 3RX
- UL/cUL Listed when using a junction box for wire termination

Long-Lasting, Energy-Efficient LEDs

- 50,000 - 100,000 hours expected LED life
- Just 48W nominal power for a 96 inch long sign
- Approximately 27 percent less power than another manufacturer's published 96 inch specification

Flexible Sizes and Designs

- 72, 96, and 120 inch standard lengths
- 18 and 24 inch standard heights
- Custom lengths and sizes available up to 24 inch height
- Single or double-faced
- Custom colors, fonts, graphics, and logos
- Multiple mounting options

Easy to Install and Service

- Toolless, lockable latches
- Top-hinging face for easy access
- External wiring connections
- Replaceable internal components

Signal-Tech SNS Series Signs

Engineered for long-term visibility, not just day-one performance.
